= Living Walls

The horticulture industry is forever changed with the introduction of the **BrightGreen Living Wall Planter**. By graphically arranging a collection of plants in our patented polymer cells and mounting them on a vertical surface, designers, architects and even the weekend gardener are now presented with a whole new world in which to express their creativity.

The BrightGreen Living Wall Planter consists of a single polymer unit and is lined with our proprietary moisture mat. Simply populate the planting cells within each unit with plants purchased at your local garden center by following the planting instructions provided in this guide.

Mounting your planter is easy! Each unit can be hung separately or in groups. Tilt the unit upright and attach it to any sound, vertical surface using the mounting bracket included with your kit.

Little Prince of Oregon is excited to introduce four types of **Living Walls**. We have three for **South or West facing exposures**. One is a **WATER MISER™ Living Wall** that includes a selection of Sedums and Sempervivums. Another is an **HERB Living Wall** that includes a selection of long lasting ornamental herbs that have culinary uses as well. The last module for **South or West facing exposures** is a mix of hardy perennials selected for color and texture.

We are also offering a **North or East facing exposure Living Wall**. This module is a mix of hardy perennials suitable for part shade to mostly shade locations. These plants are not intended for hot and sunny locations. Please refer to the tag on each module to determine the exposure requirements.

Your plants will benefit from adding a liquid feed to your watering schedule several times during the growing season. Follow the label directions from the fertilizer company. With fertilizer comes growth. Be prepared to prune your **Living Walls** as needed to promote new growth and achieve a nice compact look. Trimming a small amount more often is better than trimming too much at once. Always leave some foliage remaining after trimming.

Maintaining your **Living Wall** requires regular watering. The key to watering the **Living Wall** is to water slowly from the top of the module until water begins to drain from the bottom. It may also be necessary to water your living wall in the winter. Check the soil for moisture a couple times during the winter. Irrigate to maintain a wet but not saturated soil. Allow your **Living Wall** to dry slightly between watering. The **WATER MISER™** module will require less water than the other units.

BACKYARD:

Incorporating a **BrightGreen Living Wall** into your landscape is a natural fit. By placing one or more of our **Living Walls** onto your structure, you'll instantly soften any hard architectural lines with the natural flow of plant life. Add color and interest to any wall or concrete surface simply by adding bright flowers or plants. The **BrightGreen Living Wall Kit** makes it easy!

ACCENTS:

From a small framed arrangement to an entire facade, there is no limit to what you can create with the **BrightGreen Living Wall**. Our **Living Walls** can be hung separately or in groups, forming one seamless vertical landscape. Graphically arrange your plants by shape or color into an ever evolving one of a kind work of art, certain to be the talk of the neighborhood.

COMMERCIAL:

Vertical planting can be applied to any size wall in any climate zone, even in commercial environments. Both the aesthetic beauty and the wellness factor of large, lush green facades compliment the urban landscape. Consider the ecological benefits of sustainability, heat reduction and habitat recreation and the addition of vertical planting becomes an even better compliment to concrete structures.

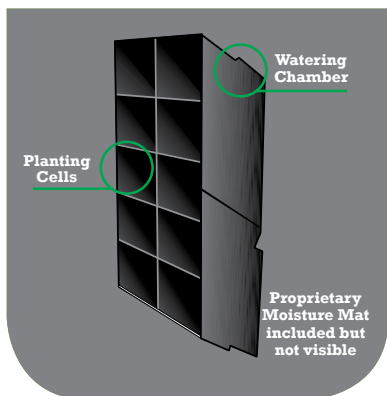

INTERIOR:

The **BrightGreen** vertical wall planter is not just reserved for outdoor spaces. When used indoors, they provide the benefits of improved air quality and an increase in your overall health and mental well being. It is a very green way to improve the way you live.

~ Water thoroughly ~

Water enters through the top watering chamber and spreads evenly across the moisture mat. Plants can be watered manually from a hose with very low pressure. Additionally, drip line systems or the patented Irrigator™ will provide water for your **Living Wall**.

PLANTING INSTRUCTIONS

Tools needed: Vertical Planter, potting mix and selection of plants

1: Lay planter flat and plug plants into cells with desired design

2: Continue planting until you've achieved your desired look

3: Once plants are packed in, fill excess air pockets or empty cells with potting mix

4: Even if each cell doesn't contain a plant, it must be completely filled with potting mix

5: Water thoroughly (see watering instructions) and tilt panel on a 45 degree angle

IRRIGATOR™ INSTRUCTIONS

Tools needed: Irrigator™ and fully planted Living Wall

1: Center the Irrigator™ to fit into top watering chamber of the Living Wall

2: The irrigator's tabs should slide into the chamber so that the Irrigator™ is snug

3: Push the Irrigator™ in all the way so that it is snug

4: Drip holes at the bottom of the Irrigator™ allow water to drip into the watering chamber

5: Fill all the way to the top as needed

HANGING INSTRUCTIONS

Begin with a fully planted Living Wall

Tools needed: fully planted Living Wall, mounting bracket, drill, screws and level

Find a retaining wall, deck railing, concrete wall or side of house to attach Living Wall

1: Mark holes for the mounting bracket, making sure to keep bracket level

2: Screw in proper screws, making sure to keep bracket level

3: Double check level

HANGING INSTRUCTIONS

4: Carefully rest Living Wall on bracket, making sure it's secure

5: Check to make sure Living Wall is both secure and level

6: Add another bracket to expand your Living Wall

7: Follow steps 1 – 5 until Living Wall is complete and secure

Congratulations!
You now have your very own Living Wall.

The possibilities are endless!

WWW.LITTLEPRINCEOFOREGON.COM

Little Prince grows plants for the Living Wall modules. CLIFF HANGERS®, WATER MISERS™, GROUND CONTROL®, MADE IN THE SHADE, and STEPABLES® are perfect choices for most Living Wall plantings. The choice is yours: buy pre-planted Living Walls or create your own work of art with plants from Little Prince.

Living Wall for South or West facing exposures

1. WATER MISER™ Living Wall:

Drought tolerant Sedums and Sempervivums.

2. HERB Living Wall:

Long lasting ornamental herbs that have culinary uses.

3. SUN PERENNIAL Living Wall:

Selected perennials with beautiful colors and textures.

4. EMPTY Module:

Select your own plants that prefer full sun to part sun exposure. All **WATER MISER™** plants are good for sun exposure.

Living Wall for North or East facing exposures

1. PART SHADE Living Wall:

Hardy perennials suitable for part shade to mostly shade locations.

2. EMPTY Module:

Select your own shade loving plants from **Little Prince's MADE IN THE SHADE** brand.

BRIGHTGREEN

BrightGreen manufactures the plastic planting modules for the Living Walls. BrightGreen is a U.S. owned and operated company based in Southeast Michigan. We're here to serve you and help "Change the Face of Gardening."
